MANNINGTON FLOOR CARE INSTRUCTIONS

- Wood flooring performs best in climate-controlled interior environments. A permanent HVAC unit should be operational in order to provide consistent room temperature between 60° and 80°F (16° to 27°C) and a humidity level of 35% to 50%. Temperature and humidity should be controlled for the life of the flooring.
- Sweep or vacuum regularly, since built-up grit can damage the finish and surface of hardwood. The vacuum head must be a brush or felt type. Be certain the wheels of the vacuum are clean and do not damage the finish. Do not use a vacuum with a beater bar head.
- Remove spills promptly using a soft cloth and cleaning products recommended by Mannington.
- Never mop or flood your floor with water or other products. This can severely damage the flooring.
- The use of Mannington maintenance and floor-care products is highly recommended.
- Do not use oil soaps, liquid or past wax products or other household cleaners that contain lemon oil, tung oil or ammonia.
- Keep pet's nails trimmed and paws clean and free of dirt, gravel, grease, oil and stains.
- Use a dolly and protective sheets of plywood when moving heavy objects.
- Make certain furniture casters and floor protectors are clean and operate properly (a minimum of 1" continuous width is recommended).
- Remove shoes with spiked or damaged heels before walking on the floor.
- Exposure to the sun and UV rays accelerates the oxidation and aging of hardwood and fabrics. This causes the stain and/or hardwood to fade and/or change color. We recommended you rearrange rugs or furniture periodically so the floor ages evenly.
- Your floor will wear more evenly if you use area rugs in heavily traveled areas and pivot-points (i.e. stair landings, room entries, etc.).
- Use dirt-trapping walk-off mats at all exterior doors to keep sand, dirt, grit, grease and oil outside.
